Redefining Growth and Purpose at Epsilon: Where Careers, Culture, and Innovation Intersect.

ET Spotlight • Last Updated: Apr 06, 2026, 09:15:00 PM IST

Preferred on  FOLLOW US SHARE FONT SIZE SAVE PRINT COMMENT

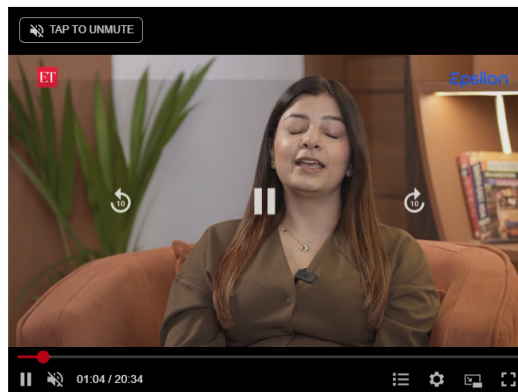

Synopsis

Epsilon India's Senior Vice President of HR, Sonali De Sarker explains how AI-led platforms, a client-centric hiring lens and democratized learning and mobility, are helping employees own their careers while HR pushes into hackathons, hybrid work and global value creation.

In a conversation with The Economic Times Neha Vashishth, Principal Content Producer and Anchor, Sonali De Sarker, Senior Vice President, HR-Epsilon India, lays out a playbook that is as much about pushing boundaries as it is about building an ecosystem where employees own their careers.

How Epsilon India is building careers through AI, access, and choice

What does it take to help people truly own their careers? At Epsilon India, it starts with making learning open, mobility visible, and AI part of everyday work. In this conversation with The Economic Times' Neha Vashishth, Sonali De Sarker shares how Epsilon uses platforms like Marcel to give employees direct access to learning, mentoring, and global roles, while building AI fluency across teams. The result is a workplace where growth is self-driven, careers are flexible, and India plays a larger role in global value creation. Watch the full interview and read how Epsilon India is shaping the future of work in the GCC era.

People philosophy: Whole selves, real impact

Sonali's people lens is disarmingly simple. "It actually boils down to pretty simple things." For her, the test is whether employees can bring their "whole selves" to work and still find fairness and joy.

That translates into a checklist that is less slogan and more operating question: "Do I enjoy working here? Can I learn? Can I grow? Can I value add? Can I make an impact? As a result, do I get recognised and do I have fun?" ERGs matter because they allow people to pursue interests outside their core roles; fair processes matter because they ensure "your impact is valued"; and fun is non-negotiable, but only when anchored in meaningful work. This philosophy sets the tone for everything from hiring to mobility: if the organisation cannot answer "yes" to those questions for enough people, HR has unfinished business.

Client-centricity

The other axis that defines Epsilon India's strategy is client-centricity. The centre has evolved into a product and engineering hub, but Sonali is clear that the underlying client obsession has not shifted. "If client centricity is important, then how do I look at my processes?" she asks, recounting an instance where a particularly critical customer forced teams to "think outside the box... without... breaking processes internally".

For HR, that means treating employees as internal clients while never losing sight of the external ones they serve. In hiring, the same principle shows up differently by role. In professional services, apart from technical depth, HR consciously screens for "good consulting skills" and the ability to explain to customers, "this is what we are looking at". In engineering, the focus shifts to "how clean is the code" and overall quality. The common thread is a single

Popular in Careers

1. Demand for senior technology leaders in India is bucking a slowdown in broader tech hiring

question: "How do we keep the client in the center of it and have different aspects of that show up in a hiring process?" That client lens, she argues, must "pervade the entire organisation", including HR itself.

AI fluency as a new baseline

If there is one force accelerating that shift, it is AI. Epsilon's products have embedded AI "for many, many years", and the company is driving AI fluency across the organization. She also talks about Marcel, Publicis Groupe's AI-powered platform that connects over 100,000 employees and offers thousands of learning modules, mentoring and internal mobility tools. Marcel, she explains, is a "hyper-personalised" learning and talent ecosystem where an engineer in India can binge on AI courses at her own pace, or a senior leader can access "cheat sheets" on writing better prompts.

Democratizing learning, careers and culture

If AI is the engine, democratization is the steering. Sonali is emphatic that learning at Epsilon India is not something managers gatekeep. On Marcel, an employee can decide, they want to learn Spanish, which is completely disassociated from their work. And there are courses available. Or dive into deep technical content without needing anyone's nod. This "democratization of learning" is mirrored in talent mobility: internal roles across Epsilon and other Publicis entities are visible, and employees who have spent 12 months in a role can apply.

GCCs, AI and the next frontier for Epsilon India

Zooming out, Sonali locates Epsilon India's journey inside a broader evolution of India's GCC landscape. The old model was "cost arbitrage... dollar or euro compared to the rupee". Now, she notes, multinational headquarters are asking "how can I leverage this team in India, bring higher value in", and shifting towards value creation, product ownership and global leadership from Indian centers.

AI, in her view, is where India's GCCs will increasingly punch above their weight. It is a space that "comes naturally to us", and she expects Indian teams to play "a larger role... globally in the years to come". At Epsilon India, that is already visible in the kind of work being led from here: client-centric product engineering, global delivery and what she describes as "the kind of impact we've made across globally".

Asked where she sees Epsilon India in three to five years, she resists easy projections. Instead, she returns to a theme that has run through every answer: "Epsilon India is anyway an integral part of Epsilon globally, but it's all about saying what's the next step". In her lexicon, the next step is almost always about "pushing boundaries and just moving higher", whether that is HR teams cracking AI hackathons, employees crafting their own global careers through Marcel, or an organization choosing to treat AI not as a threat but as an everyday instrument for better, more human work.

Synopsis

India's data centre market is set for massive growth, expected to reach 22 billion dollars by 2030. This expansion is fueled by cloud computing and artificial intelligence. Significant investments are flowing into the sector, with foreign investors leading the way. Government incentives and cost advantages are making India a prime location for data infrastructure development.

Representative image.

India's **data centre** market—valued at approximately USD 10 billion in 2025—is expected to more than double to USD 22 billion by 2030, driven largely by the rapid growth in cloud computing, artificial intelligence and data-intensive technologies.

Between 2020 and 2024, the center

Most Searched Stocks

Tata Motors PV Share Price	345.5	11.8%
04:00 PM 13 Apr 2026	+2.9(0.85%)	Upside

BETWEEN 2020 AND 2024, THE SECTOR attracted approximately USD 13–15 Bn in investments, with foreign institutional investors accounting for nearly 80% of the total capital inflows, according to property consultant [Vestian](#).

The investment pipeline remains strong, with announced projects totalling USD 60–70 Bn over the next five years, largely driven by hyperscale platforms and joint venture developments.

The global data centre market is also expanding rapidly, with 40–50 GW of current installed capacity worldwide and projections exceeding 100 GW by 2030.

India's accelerating digital economy, expanding internet user base, and increasing investments from hyperscale operators are positioning it as a key destination for data infrastructure development.

Country's rapid growth can be attributed to rising internet and telecommunications subscribers, increasing enterprise cloud adoption, expanding AI and high-performance computing workloads, and shifting consumer preferences towards digital payments and OTT platforms. The rollout of 5G infrastructure has pushed average monthly wireless data consumption beyond 25 GB per user, reflecting a sharp rise in data usage and reinforcing the need for scalable data centre infrastructure.

"Despite a limited share of global capacity, India has a huge upside potential to lead in AI infrastructure. With single-window clearances, 20-year tax exemptions, GST benefits, and incentives extending to 2047, India is strategically positioned to emerge as a global data centre and AI hub," said Shrinivas Rao, FRICS, CEO, Vestian.

India also offers a competitive cost advantage, with data centre construction costs of USD 6–7 Mn/MW, significantly lower than those in mature APAC markets such as Singapore and Japan, thereby enhancing its attractiveness for large-scale investments.

Data centre infrastructure in India remains concentrated in a few key metropolitan markets. Mumbai remains the country's largest data centre hub, driven by strong global connectivity and infrastructure advantages. At the same time, Chennai serves as a key global data gateway, with multiple submarine cable landings that enable high-capacity, low-latency connectivity. Meanwhile, Hyderabad, Bengaluru, and Pune are emerging as important secondary hubs owing to robust IT ecosystems, ample land availability, and competitive operating costs.

Operational capacity in Tier-II markets is currently estimated at 60–80 MW and is expected to exceed 100 MW by the end of 2026.

India's data centre market is expected to witness sustained expansion over the next decade as digital transformation accelerates across industries. Installed capacity is projected to reach 1.7–2.0 GW by the end of 2026, backed by nearly USD 30 Bn in investments.

This number is further expected to go up to 4–5 GW by 2030. Rising AI adoption, increasing demand for cloud infrastructure, and the rapid growth of digital platforms are expected to drive the next wave of growth in India's data centre market.

NCLT clears merger of Nirmal Lifestyle Realty with Oberoi Realty

By Kailash Babar & Maulik Vyas, ET Bureau • Last Updated: Apr 13, 2026, 11:19:00 AM IST

Select 5 as FOLLOW US SHARE FONT SIZE SAVE PRINT COMMENT

Synopsis

The National Company Law Tribunal has approved the merger of Nirmal Lifestyle Realty with Oberoi Realty. This move will simplify Oberoi Realty's group structure and enhance operational efficiencies. Nirmal Lifestyle Realty will be dissolved without winding up. The amalgamation aims to optimize resource utilization and provide a clearer strategic roadmap.

Oberoi Realty & Nirmal Lifestyle get NCLT approval for merger

Mumbai: The National Company Law Tribunal (NCLT) has approved the [amalgamation](#) of [Nirmal Lifestyle Realty](#) with listed developer [Oberoi Realty](#), paving the way for consolidation within the latter's group structure as it sharpens operational focus and streamlines its business.

The order, pronounced Mumbai bench of the tribunal, sanctions the scheme under Sections 230–232 of the [Companies Act](#), 2013, and will be binding on all stakeholders, including shareholders, creditors, and employees. As part of the scheme, the transferor entity, Nirmal Lifestyle Realty, will stand dissolved without undergoing the process of winding up.

Also Read: [NCLAT reaffirms project-specific insolvency proceedings against realty firms](#)

Nirmal Lifestyle Realty owns a prime land parcel in Mumbai's eastern suburb Mulund and this company was formerly known as Ralli Wolf.

Both companies are engaged in [real estate development](#), with Oberoi Realty also having exposure to hospitality assets. The tribunal noted that the scheme is aimed at simplifying the group structure, improving operational efficiencies, and enabling better resource utilisation.

The merger involves a wholly owned subsidiary structure, with the entire shareholding of Nirmal Lifestyle Realty already held by Oberoi Realty or its nominees. Accordingly, no fresh shares will be issued as consideration, and the existing share capital of the transferor company will stand cancelled upon the scheme becoming effective.

Oscars 2025 Live News Update

The tribunal observed that all statutory compliances had been met and that no objections were received from regulators, creditors, or other stakeholders. Reports from the Regional Director, Official Liquidator and the Income Tax Department were considered, with the companies providing necessary undertakings in response to observations raised.

The Official Liquidator, in his report, stated that the affairs of the transferor company had not been conducted in a manner prejudicial to public interest or to creditors. Meanwhile, the Income Tax Department retained the right to examine any tax implications arising from the scheme and to initiate action if required under prevailing laws.

ET's email query to Oberoi Realty remained unanswered until the time of going to press.

The companies have also undertaken to comply with all applicable regulatory requirements, including those under the Companies Act, income tax laws, and other sectoral regulations. The tribunal directed the entities to file the order with the Registrar of Companies within 30 days and complete stamp duty adjudication formalities within 60 days.

The consolidation reflects a broader trend among listed developers to rationalise group structures and consolidate assets within fewer entities to drive efficiency, reduce costs and enhance transparency for investors.

Synopsis

Synopsis

Homebuyers' insolvency cases against real estate firms will now be limited to the specific project facing default. The National Company Law Appellate Tribunal has ruled that extending these proceedings to other projects of the company is not beneficial for homebuyers or other stakeholders. This decision ensures that unrelated projects are protected.

NCLAT

New Delhi: The National Company Law Appellate Tribunal has reaffirmed that [insolvency proceedings](#) initiated by [homebuyers](#) against realty firms must remain confined to the specific project where default has occurred and cannot extend to other projects of the corporate debtor.

The appellate tribunal highlighted that putting all other projects of the realty firms, which are unrelated to the default, is not in the interest of homebuyers
